

FOOTPRINT SCAN YOUR FOOTPRINT SOLUTION FOR NEWBORN BABIES

Based on years of experience in the maternity setting and with guidance from the National Center for Missing and Exploited Children (NCMEC) in the United States, CertaScan has created an accurate process for infant identification that is easy to implement and use in a hospital setting. Our Infant Security System provides digital capture and storage of the newborn's fingerprints, the baby's security photo and the mother's index fingerprints.

The CertaScan system consists of the latest scanning technology and proprietary software to provide hospitals with accurate identification for use in emergency situations, giving parents peace of mind and reducing the hospital risk profile. We keep babies safer, one foot at a time.

Health Point Europe SL as an art of its EMEA channel, offers valuable services such as local support, integration with information systems and the experience of working in Europe on a everyday background.
